BULLENCIAGA / WHITEPAPER 2.2

THE HOUSE, ON-CHAIN

A living system. A verifiable record.

$BULLEN supply control, the HERD, House Objects, private rooms and the BULLENSAGA game in production.

SOLANA / TOKEN-2022 / METAPLEX CORE

14 NOVEMBER 2026

01 / SYSTEM

One connected House

A token, an art collection, working tools and an indie game in production.

BULLENCIAGA connects the Token-2022 $BULLEN asset with collectible art, numbered House Objects, public verification tools and community services. BULLENSAGA is the game being built within that wider world. Each part has its own purpose, rules and record.

LIVE NOW, IN PRODUCTION, AND PLANNED

STATUS	SYSTEMS
Live	$BULLEN, the HERD, Signet and Cufflinks claims, automatic House Key awards and the private Salon.
Live	Wallet Passport, Living Ledger, market and supply tools, The Drop, referrals and community services.
Open during development	BULLENSAGA preorders, Founding Records, one-time contributions and monthly support.
In production / future scope	The game, physical rewards and later product phases. Funding milestones are not release dates.

THE ACCOUNTING RULE

- An escrow deposit is a **commitment to burn**. It has not yet reduced total token supply.
- Only a confirmed Token-2022 burn is recorded as **destroyed supply**.
- A preorder, support payment or manual award is recorded for what it actually does. It cannot stand in for an on-chain burn.
- Collectible inventory, payment allocations, access rights and token supply are separate records. Public views connect them without counting the same event twice.

This edition updates the August 29 document to the systems live on September 9, 2026. Fixed issue limits and published token allocations are retained. Changing balances, prices, availability and completed transactions belong in the linked live records.

Explore BULLENCIAGA · Explore BULLENSAGA

02 / TOKEN

$BULLEN and the locked schedule

Public identities and fixed milestones, with current custody available to inspect.

FIELD	CANONICAL VALUE
Chain / program	Solana / Token-2022
Original supply	1,000,000,000 $BULLEN
Token mint	BULLENxRbvuwjo4DLBKBbh23cNQ4ZbpDeQKuoVXL7exN
Development wallet	GV7XDVAkra3Kjr4b2f2nyYrhL9gqEx5gvevdkTBzyYmd
Public burn escrow token account	FUtAEk1TAVf2WZ3wqXeHYttqfpTftEf6qrprue5x6mLy
Mint / freeze authority	Revoked; independently verifiable on-chain

THE 250 MILLION ALLOCATION

The volume schedule allocates 250,000,000 $BULLEN across five cumulative trading-volume milestones. Percentages below are **running totals of that allocation**, not percentages of the original billion-token supply.

TIER	CUMULATIVE VOLUME	RUNNING ALLOCATION BURNED
01	$250,000	5% / 12,500,000 $BULLEN
02	$1,000,000	15% / 37,500,000 $BULLEN
03	$5,000,000	30% / 75,000,000 $BULLEN
04	$20,000,000	55% / 137,500,000 $BULLEN
05	$50,000,000	100% / 250,000,000 $BULLEN

Tier one executed on August 11, 2026, destroying 12,500,000 $BULLEN. The later steps remain subject to their volume thresholds and the actual lock-release process. A threshold does not override a lock's hard cliff.

The reserve is held in Jupiter Lock between release cycles. Current tranche amounts, hard-cliff dates and escrow links are published on the live lock page. Transfers or relocking are custody events; they do not themselves destroy tokens.

Current locks · Supply history · Burn proof

03 / SUPPLY REDUCTION

Commitments become proof

Supply falls when a burn is confirmed, regardless of which activity funded it.

MECHANISM	PUBLISHED AMOUNT	CONDITION
Volume schedule	250,000,000 $BULLEN maximum	All five fixed milestones execute.
HERD public claims	250,000 $BULLEN each	Deposit to escrow, followed by a confirmed burn.
Signet / Cufflinks public claims	100,000 $BULLEN each	Deposit to escrow, followed by a confirmed burn.
Game preorders / direct support	Published payment allocation	Buybacks, burns or the published preorder fulfilment route; only actual confirmed burns reduce supply.

THE ESCROW LIFECYCLE

1. A public claimant signs a Token-2022 TransferChecked for the exact published amount into the canonical burn escrow token account.

2. The claim system verifies the token mint, source, destination, amount and transaction before fulfilment.

3. The deposit is recorded as committed. A later scheduled burn destroys the tokens.

4. The confirmed burn signature becomes the supply-reduction evidence. Commitment records are not added again as another burn.

MAXIMUMS ARE CONDITIONAL

A complete 1,000-piece HERD public run can commit 250,000,000 $BULLEN. Across 25 Signets and 25 Cufflinks, the all-paid ceiling is a further 5,000,000. Together with the 250,000,000 volume allocation, these three defined mechanisms have a **505,000,000-token theoretical ceiling**.

That ceiling is not a forecast or a guaranteed minimum. Preorder and manual object awards consume the same numbered stock without creating a 100,000-token deposit. A HERD claim funded through a preorder giveaway remains part of the HERD route, not an extra claim outside its cap. Other confirmed discretionary burns or payment-funded buybacks are tracked by their own actual records.

Live supply and collectible activity · Living Ledger

04 / THE HERD

A thousand distinct pieces

Collectible identity, weighted rarity and an established burn-to-collect route.

The HERD is a 1,000-piece collection spanning twelve published trait categories. A public claim commits **250,000 $BULLEN** to the burn escrow for a random available piece. Rarity and individual artwork can be explored in the public gallery.

CREATOR-FEE PARTICIPATION

The published participation pool covers ten designated pieces. Two Relics and three Grails carry 2.5% each; five Legendary pieces carry 1.5% each. These are creator-fee shares after marketing allocation, not percentages of trading volume or token supply.

DESIGNATED GROUP	PIECES	SHARE PER PIECE	COMBINED SHARE
Relic / Grail	2 + 3	2.5%	12.5%
Legendary	5	1.5%	7.5%

Up to an additional 25% of creator-fee revenue may be assigned to early marketing backers under their published terms. Reconciliation is weekly. Payouts depend on actual creator fees and eligibility; there is no fixed or guaranteed return.

THE COLLECTION WITHIN THE HOUSE

House Objects and Founding Records are companion collectibles. They do not rewrite a HERD piece's original artwork or metadata. Gallery and wallet views can show these collections together, with rarity, ownership and House Pair status drawn from their respective records.

A Signet plus Cufflinks in the same wallet can qualify for the earned Key under the rules on page 06. The Key is a separate transferable asset. Salon access is checked against current Key ownership.

HERD gallery · Wallet Passport · House Objects

05 / HOUSE OBJECTS

The first pair

Two numbered digital objects, drawing from one controlled inventory.

House Object 01: The Signet. 25 editions.

House Object 02: The Cufflinks. 25 editions.

Each series is permanently capped at **25**. Future designs may join the same House Objects collection. A public claim commits **100,000 $BULLEN** into burn escrow. Estate Founding I preorders and explicit manual awards draw from the same numbered stock. Those awards reduce available inventory but do not fabricate a token payment or burn.

WHAT THE PAIR DOES

Holding a Signet and Cufflinks together qualifies a wallet for an automatic Key award when the eligibility rules are satisfied. Their serial numbers do not need to match. A source pair already used for a Key cannot earn another by moving wallets.

These are NFTs. Future physical-product priority or curated participation applies only when its specific terms are published. It does not make the digital Signet or Cufflinks a prepaid physical product.

Claim and inspect House Objects · Public Registrar

06 / THE KEY

The Salon is open

An earned Key opens private rooms within the House.

House Object 03: The Key. Earned through an eligible House Pair.

AUTOMATIC DELIVERY

- A House Pair is one finalized Signet plus one finalized Cufflinks in the same wallet. Matching serials are not required.
- One wallet can earn at most one Key. Each source Signet and Cufflinks can support only one award, even after a transfer.
- Wallets already holding a Key are excluded from automatic award reconciliation. Eligibility is checked again before minting.
- The Key has a **25-edition cap**. A qualifying award is queued for automatic delivery with **no second token payment**.

INSIDE THE ROOMS

The Salon is live, with persistent conversations and shared images. Entry requires a signed wallet session and current verified Key ownership. Access follows the Key if it transfers. Ordinary public community spaces remain open without an NFT.

The Key and its rules · Enter Inner Rooms

07 / BULLENSAGA

A game with a world behind it

A dark fantasy evidence roguelite in production, with six investigators and four realms.

BULLENSAGA grew from a simple mobile-game idea into a larger indie game built around investigation, evidence and the Estate's buried history. Development takes time. Smaller playful apps may still be explored, but they are not a promised release schedule.

The Promise. Maximum 200 Founding Records.

The Triad. Maximum 100 Founding Records.

FOUNDING I EDITION	INCLUDED COLLECTIBLE RECORDS
House	The Promise
Estate	The Promise, The Triad, The Signet and The Cufflinks

A bundle is reserved only when every promised numbered record is available. Any later edition must name its actual included issue and terms; paid orders are never silently substituted. The current checkout defines the game edition and all included benefits.

A game-only card preorder does not require a wallet. Collectible editions use a wallet for delivery. Preorder burn allocations follow the recorded checkout terms; a committed dollar allocation is not already destroyed token supply.

The game · Preorder editions · Public Registrar

08 / DIRECT SUPPORT

More time to build

Development continues at every funding level. Support helps fund the work.

One-time and monthly contributions are separate from game preorders. One-time support accepts card or supported crypto payments; monthly support uses card billing. A contribution does not include a game copy. A private receipt link provides payment status and subscription management.

Under the current support terms, 10% of received one-time and monthly support, excluding tax and before fees, is allocated to $BULLEN buybacks and burns. Earlier receipts retain their recorded allocation rate. Refunds and reversals adjust the qualifying base. The development total excludes the burn reserve, fees and other recorded deductions. A reserve is recorded separately from an executed burn.

RECOGNITION ACROSS PAYMENTS

Paid one-time and monthly support combine by email, before fees and burn allocations, less refunds and disputes. Unpaid requests and preorders do not enter this lifetime total. Cancelling monthly support preserves earned permanent rewards; reversed payments can reduce eligibility.

LIFETIME SUPPORT	REWARD
$100	An optional short in-game dedication.
$500	A collector figurine at no extra reward charge, subject to physical production and delivery being funded and completed.

Estate Edition already includes the **in-game dedication**. It does not automatically include the support figurine. These rewards are distinct from the preorder's own collectible records.

ONE CAMPAIGN, FIVE CUMULATIVE MILESTONES

CUMULATIVE DEVELOPMENT FUNDING	PURPOSE
$5,000	Playable demo
$15,000	Workstation and production tools
$30,000	A year to build
$50,000	Game completion
$75,000	Full voice cast

These are cumulative funding landmarks, not five separate budgets or guaranteed delivery dates. The live page shows development funding after the recorded deductions; this PDF does not freeze a changing total.

Support development · Current support terms

09 / PARTICIPATION

The Drop and referrals

Published eligibility, actual fee funding and records that can be checked.

THE DROP

The Drop is a **2.5 SOL** draw funded by a share of actual creator fees from qualifying buys. Its progress follows funding, not a countdown. Each completed **0.25 SOL** of qualifying House-pool buys earns an entry; small buys accumulate. Pool fees count toward buy size, but network, router and wallet fees do not.

Sales consume the newest purchase batches first. Touching a completed batch removes its entry; touching unfinished progress discards it. Later buys create fresh entries rather than restoring broken batches. Sales do not subtract fees already in the pot.

Before a draw, a public finalized eligibility snapshot is recorded ahead of the selection seed. The draw page explains the qualification rules, funding state and verification path. Buying a token does not guarantee a prize, and the funding bar does not promise when the next draw will happen.

The Drop: rules and current draw

REFERRAL RECORDS

A wallet signs a permanent, forward-only referral binding. Only eligible buys after registration enter the calculation. Weekly SOL referral rewards depend on actual qualifying activity and the published fee schedule.

Self-referral can earn the published trading-fee reward. It does **not** turn a person's own HERD mints into qualifying referred mints for the custom-art reward.

Three qualifying referred public HERD mints earn the referrer a custom 1-of-1 under the published programme. Public mint qualification is separate from trading-fee eligibility; the same word "referral" must not blur those two rules.

Referral registration, rules and payouts

GIVEAWAYS

Published giveaways have their own eligibility and closing rules. Giveaway activity, referral qualification and Drop entries are not interchangeable balances. The records show the relevant event and outcome for each programme.

Giveaway records

10 / PUBLIC TOOLS

Follow the record

Different questions have different views, all linked back to their source.

TOOL	WHAT IT HELPS VERIFY
Wallet Passport	Public wallet holdings, collectibles and relevant status.
Living Ledger	Public market, supply, custody and collectible activity with source links.
Stats	Market and supply figures, mints and House Object commitment records.
Chart	Market history with relevant confirmed burns, mints and published commitment events.
The Tape	Recent activity and transaction links, subject to data arrival and confirmation.
Burn Curve	Sampled token supply and confirmed burn transactions.
Live Locks	Current escrow tranches, hard cliffs, on-chain verification and indicative USD values.
Public Registrar	Public BULLENSAGA and House collectible records.

READ THE EVENT CORRECTLY

A price estimate is not a redemption value. A pending payment is not revenue received. A mint is not automatically a burn. A lock release is not destroyed supply. Each view should be read according to the event it actually records.

RPC, market and indexing services can update at different times. For a specific transaction, the finalized on-chain record and its exact signature are the relevant evidence. For order terms, use the edition and payment terms attached to that order.

The public Registrar and public Living Ledger are reader-facing tools. They do not expose a customer's private receipt or the operator's administration ledger.

Latest published changes · Supply endpoint

11 / COMMUNITY AND ROADMAP

The House keeps expanding

Working community services alongside product phases that develop at their own pace.

Public Telegram and Discord spaces are open without an NFT. BULLENBOT and SAGABOT support collectible displays, shared raids and weekly scores, optional alerts and holder roles. Discord adds community activities, streaks, quizzes and cosmetic ranks or badges.

First-look previews are available through the published holder-access rules for Keys and Founding Records. Private access is checked against the relevant current holding. Community points and cosmetic status are not cash balances or guaranteed rewards.

Join Discord · Join Telegram

THE PUBLISHED PHASES

PHASE	SCOPE
01 / Deploy $BULLEN	Token and HERD launch.
02 / First Blood	First volume burn, executed August 11, 2026.
03 / The House Fills Up	$1 million and $5 million volume tiers.
04 / The Vault Empties	One portion at $20 million; the rest at $50 million.
05 / House Objects	Signet and Cufflinks are live; earned Keys and the Salon are live.
06 / BULLENSAGA	Game in production; preorders, Founding Records and direct support are open.
07 / $BULLEN Staking	Future scope; requires published terms before activation.
08 / The Collab	Future fashion collaborations; specific commitments require announcement.

Phases 05 to 08 are not gated by cumulative trading volume and may develop in a different order. Physical releases, staking and collaborations remain distinct from the features already available. Their appearance on a roadmap is not proof of delivery.

12 / ISSUANCE

Numbered records, controlled delivery

Two Metaplex Core collections support several verified allocation routes.

COLLECTION	INCLUDED SERIES
BULLENCIAGA - HOUSE OBJECTS	The Signet, The Cufflinks and The Key
BULLENSAGA - FOUNDING RECORDS	The Promise and The Triad

The first Signet and Cufflinks series are capped at 25 each. The Promise is capped at 200 and The Triad at 100. Keys have a separate 25-edition cap and use the published pair-award rules. These five series total 375 possible numbered records. A record is not sold merely because a payment form could accept money; all promised stock must be reservable.

COLLECTION IDENTITIES

House Objects: 9ucdkSaiTLUDXmVCjWonxAJqrTH9uyB675BzzRi5vqgM

Founding Records: FnbDXuPxcy87y451eYimMTDrrPqoFRMVi4ctAu73XVkD

AUTHORITY AND DELIVERY

- The development wallet is the root update authority on both Core collections. The isolated managed issuer acts as an Update Delegate for automated delivery.
- The development wallet is the sole designated creator at a requested 10% collection royalty. Marketplace enforcement may vary.
- The development wallet's signing seed is not installed in the automated issuer or exposed in website code.
- A verified payment, escrow claim or earned award creates a durable delivery job tied to the numbered inventory record.
- The worker uses deterministic asset addresses and on-chain checks before retrying. A retry must not consume another serial or mint a second copy of the same record.
- If issuance cannot safely proceed, the job remains queued for resolution. A queued job is not reported as a completed mint.

Inspect public collectible records

13 / VERIFICATION

Read what the House leaves behind

Use the current source for the current claim.

START WITH THE EVIDENCE

- **Token identity and supply:** the $BULLEN mint, live supply and signed burn proof.
- **Custody:** current Jupiter locks and tranche links.
- **Ownership and access:** House Objects, Wallet Passport and Inner Rooms.
- **Participation:** The Drop, referrals and giveaway records.
- **The game and payments:** BULLENSAGA, preorder editions, funding and support terms.

RISKS AND LIMITS

$BULLEN is a community token. Holding it is not an ownership share in the game or a guarantee of profit. This document describes the project; it does not guarantee price, liquidity, NFT value, fees, referral income, prizes, staking returns, marketplace support or a release date.

Cryptocurrency prices are volatile. Wallet, smart-contract, infrastructure, RPC, marketplace and operational failures remain possible. A collection royalty setting does not guarantee that every marketplace will enforce it. Current on-chain ownership controls transferable access.

The game and physical contributor rewards require further work. Funding milestones are not release dates or evidence of completed work. Check the current terms for the contribution or edition being purchased and preserve the private receipt for payment-specific questions.

EDITION RECORD

Whitepaper 2.1 · September 9, 2026. This factual refresh supersedes the August 29 edition's future-Key wording and adds current rooms, tools, participation and direct-support coverage. It does not change the fixed burn milestones, public claim prices or recorded preorder terms.

The House does not ask to be believed. It leaves a record.
