

BULLENCIAGA

THE HOUSE, ON-CHAIN

Technical whitepaper 2.0

\$BULLEN supply control, The Herd, House Objects and the BULLENSAGA founding record system.

SOLANA / TOKEN-2022 / METAPLEX CORE

01 / SYSTEM

One connected House

The token, the art and the game now share one public accounting model.

BULLENCIAGA is a connected on-chain system: the Token-2022 \$BULLEN asset, a fixed volume-triggered burn schedule, the 1,000-piece Herd, numbered House Objects, and BULLENSAGA. Each element has its own job; none is allowed to blur what actually happened on-chain.

One wallet. One escrow. One number.

ACCOUNTING RULE

- An escrow deposit is published as **committed to burn**.
- A token is published as **destroyed** only after a confirmed Token-2022 burn reduces total supply.
- A preorder or manual award consumes numbered collectible inventory but never creates a fictional token-burn record.
- The supply curve and burn proof ledger show confirmed destruction. House Object commitments remain a separate main-page and Stats registry until their escrow burn lands.

1B ORIGINAL \$BULLEN SUPPLY	1,000 HERD ISSUE	500 NEW NUMBERED RECORDS
3 PUBLISHED BURN PATHS	2 NEW CORE COLLECTIONS	0 NEW TOKEN MINT AUTHORITY

02 / TOKEN

\$BULLEN facts

Authority, custody and proof are meant to be independently checked.

FIELD	CANONICAL VALUE
Chain / program	Solana / Token-2022
Original supply	1,000,000,000 \$BULLEN
Mint	BULLENxRbvuwjo4DLBKBbh23cNQ4ZbpDeQKuoVXL7exN
Development wallet	GV7XDVAkra3Kjr4b2f2nyYrhL9gqEx5gvevdkTBzyYmd
Public burn escrow	FUtAEk1TAVf2WZ3wqXeHYttqfpTftEf6qrprue5x6mLy
Mint / freeze authority	Revoked; read live from chain

THE LOCKED SCHEDULE

The 250,000,000-token launch allocation is not reported as circulating. It remains in Jupiter Lock between milestones. When a cumulative-volume threshold is reached, the due share is released, destroyed and the remainder relocked. The site links the current lock rather than pretending one escrow address remains permanent across every cycle.

Tier one executed on 11 August 2026 and destroyed 12,500,000 \$BULLEN. Every later status is sourced from chain and DEX data, not from this PDF.

REFERRALS AND CREATOR FEES

Referral binding is signed, forward-only and permanent. Only buys after the binding count. Sells do not count, and self-referral does not manufacture value. Three referred public Herd mints earn one custom 1-of-1 under the published programme. The record and payout view remain public at bullenciaga.com/refer.

Five Grail pieces retain 2.5% each and five Legendary pieces retain 1.5% each of creator-fee participation after marketing spend. Up to an additional 25% may be assigned to early marketing backers under their published terms. Reconciliation is weekly, normally Sunday; every payout depends on actual trading and is neither fixed nor guaranteed.

03 / BURNS

Three paths, one standard of proof

Commitment and destruction are related events, not synonyms.

PATH	TRIGGER	AMOUNT	PUBLIC PROOF
Volume schedule	Cumulative trading milestones	250M max	Confirmed burns / supply steps
The Herd	Public numbered claim	250K each	Escrow deposit, then scheduled burn
House Objects	Public Signet or Cufflinks claim	100K each	Escrow deposit, then scheduled burn

VOLUME MILESTONES

TIER	CUMULATIVE VOLUME	RUNNING ALLOCATION BURNED	STATUS
01	\$250,000	5% / 12.5M	Executed
02	\$1,000,000	15% / 37.5M	Pending
03	\$5,000,000	30% / 75M	Pending
04	\$20,000,000	55% / 137.5M	Pending
05	\$50,000,000	100% / 250M	Pending

THE TOKEN-2022 ESCROW LIFECYCLE

- The holder signs a Token-2022 **TransferChecked** for the exact published amount into the canonical burn escrow token account.
- The allocation ledger verifies the mint, source wallet, destination escrow, decimals and signature before a numbered record leaves inventory.
- The commitment registry publishes the deposit proof immediately without subtracting it from total supply.
- The scheduled burner later signs the Token-2022 burn. Only then does the supply history and signed burn ledger show the reduction.

04 / THE HERD

A thousand pieces, paid in participation

The original collection remains intact and continues to carry the first major burn-to-collect mechanism.

1,000 NUMBERED PIECES	250K \$BULLEN PER PUBLIC CLAIM	250M MAXIMUM COMPLETE-RUN BURN
--------------------------	-----------------------------------	-----------------------------------

COLLECTION

The Herd spans twelve trait categories with weighted rarity from Common through Grail. Five unnumbered Grail pieces and five numbered Legendary compositions sit outside the ordinary trait pool. The original assets are not rewritten to install House Objects; ownership is read wallet-wide and the site can render status or equipment around whichever Herd piece the holder selects.

CREATOR-FEE PARTICIPATION

TIER	PIECES	SHARE EACH	COMBINED
Grail	5	2.5%	12.5%
Legendary	5	1.5%	7.5%

Percentages apply to post-marketing creator fee revenue. Payouts scale with actual trading activity and are not fixed, guaranteed, or a promise of value.

HOUSE LAYER

- The Signet adds the founding House mark, private access and published first-refusal eligibility.
- The Cufflinks complete House Pair I.
- A wallet holding both at the future published snapshot can receive The Key without a second token payment.
- All gating checks current on-chain ownership because every House Object is transferable.

05 / HOUSE OBJECTS

The first pair

Two restrained objects, one shared numbered allocation.

HOUSE OBJECT 01 / THE SIGNET / 100 EDITIONS

HOUSE OBJECT 02 / THE CUFFLINKS / 100 EDITIONS

PUBLIC CLAIM

A public claim commits exactly 100,000 \$BULLEN to burn escrow and reserves the lowest available serial. Existing holders receive a 48-hour first-access window before the claim becomes public. Estate Founding I and explicit manual awards draw from the same 100-edition rows; no hidden allocation can oversell them.

HOLDER STATUS

- Pairing and visible set progression.
- Private access and curated participation when announced.
- Priority for future physical releases when practical and explicitly published.
- Transferable status: access follows current ownership, not the first recipient.
- A later free Key award for the published Pair I snapshot.

06 / BULLENSAGA

Founding records for the game

The Promise and the Triad connect preorder entitlement to the same controlled fulfillment system.

THE PROMISE / 200 MAXIMUM

THE TRIAD / 100 MAXIMUM

EDITION	FOUNDING I RECORDS
House	The Promise
Estate	The Promise + The Triad + The Signet + The Cufflinks

The Promise is capped at 200. The Triad is capped at 100. Estate Founding I can be sold only when all four promised rows can be reserved together. If the first House Object pair closes, a later Estate wave can explicitly name Objects 03 and 04; an already-paid Founding I order is never silently downgraded or substituted.

A published portion of each completed game preorder is tracked as committed to supply reduction. Fulfilment may be a direct \$BULLEN burn or a Herd giveaway mint whose 250,000-token claim enters the established escrow flow. The preorder event can show the committed USD amount immediately; destroyed supply changes only after a confirmed Token-2022 burn.

07 / ISSUANCE

Two collections, controlled automation

Candy Machines are unnecessary for a numbered, server-issued system with several valid allocation paths.

COLLECTION	SERIES	CAP
BULLENCIAGA - HOUSE OBJECTS	The Signet	100
BULLENCIAGA - HOUSE OBJECTS	The Cufflinks	100
BULLENSAGA - FOUNDING RECORDS	The Promise	200
BULLENSAGA - FOUNDING RECORDS	The Triad	100

AUTHORITY MODEL

- The personal development wallet is the named root update authority on both Metaplex Core collections.
- The isolated Turnkey issuer is attached as collection Update Delegate for automated numbered delivery.
- The development wallet is the sole creator at a 10% collection royalty and remains the wallet used to claim marketplace profiles.
- The personal development seed is never placed in Turnkey, Cloudflare, the repository, Drive or browser code.
- The issuer carries only a reloadable SOL operating balance. If it is low, paid jobs remain queued until it is funded.

DELIVERY

A verified payment, escrow claim or manual award allocates one numbered row and creates one durable mint job. The worker derives one deterministic asset address, preflights the chain before retries, builds only approved Core create transactions, and writes the confirmed address and signature back to the same row. A retry cannot consume a second serial.

08 / SUPPLY

Maximums without double counting

The headline number changes only when the chain does.

MECHANISM	MAXIMUM	CONDITION
Volume schedule	250,000,000	All five milestones execute
The Herd	250,000,000	All 1,000 public claims are deposited and burned
House Objects 01 + 02	20,000,000	All 200 enter through public claims and are burned

500M FIXED SCHEDULE + COMPLETE HERD	20M INITIAL HOUSE PUBLIC-CLAIM CEILING	520M COMBINED THEORETICAL CEILING
---	--	---

The 520M figure is a theoretical ceiling, not a forecast. It requires every volume tier, every public Herd claim, and all 200 first-wave House Objects to enter through the public burn route. Any House Object allocated by preorder or manual award still reduces inventory but does not add 100,000 to burn commitments. The live supply endpoint is always the current authority.

PUBLIC DISPLAYS

- **/stats** shows current supply, scheduled burns, Herd and House Object mints, plus the compact House commitment registry.
- **/chart** shows ordinary events for confirmed burns, collectible mints and published BULLENSAGA preorder commitments; only confirmed burns affect supply.
- **/curve** shows the sampled supply line and signed burn transactions only, whatever mechanism produced them.
- The main page shows public claims, committed \$BULLEN and remaining Signet/Cufflinks inventory.

The House opens in layers

Volume milestones govern the locked schedule; product phases can proceed independently.

PHASE	NAME	PUBLISHED SCOPE
01	Deploy \$BULLEN	Token and The Herd go live
02	First Blood	\$250K tier executed 11 Aug 2026
03	The House Fills Up	\$1M and \$5M burn tiers
04	The Vault Empties	One portion at \$20M; the rest at \$50M
05	House Objects	Signet and Cufflinks; first 100 each
06	BULLENSAGA	Game preorders and founding records
07	\$BULLEN Staking	Published terms before activation
08	The Collab	Fashion-industry collaborations

Phases 05 through 08 are not gated by cumulative volume and may complete in a different order. Staking rewards, physical priority, curated participation, the Key snapshot and collaboration terms do not exist merely because they are named here; each requires its own published rules before activation.

Read the records, not the promise

Every number intended to matter has a public place to be checked.

-
- Mint and freeze authority, live supply and circulating supply: bullenciaga.com and [/supply](#).
 - Current lock and release custody: bullenciaga.com/lock.
 - Per-transaction burn proof and reconciliation: bullenciaga.com/supply/proof.
 - Supply history and curve: bullenciaga.com/curve.
 - House Object escrow-deposit commitments: the main page and the compact shared registry on [/stats](#).
 - Collection mints and BULLENSAGA commitment events: bullenciaga.com/chart.
 - Referral bindings and payouts: bullenciaga.com/refer.
 - Current NFT ownership, collection authority and transfers: Solana explorers and compatible wallets/marketplaces.

RISK DISCLOSURE

\$BULLEN is a community token, not a security, and this document is not financial advice. Cryptocurrency markets are volatile. Token value, liquidity, NFT value, marketplace support, creator-fee revenue, referral payouts, staking rewards, physical production and delivery timelines are not guaranteed. Burn timing depends on organic trading and real claims. Smart-contract, infrastructure, wallet, RPC, marketplace, regulatory and operational risks remain.

Collection royalty settings can express the project's requested 10% royalty but marketplace enforcement and buyer behaviour may vary. Transferable status follows current ownership, so a seller gives up the associated access. Users should verify authority, balances, signatures and ownership independently before acting.

THE HOUSE DOES NOT ASK TO BE BELIEVED.
IT LEAVES A RECORD.
